How are corals abiotic

## How are corals abiotic

Healthy coral reefs **are** among the most biologically diverse and economically valuable ecosystems on earth, providing valuable and vital ecosystem services. Both **abiotic** and biotic factors determine both where an organism can live and how much a population can grow. A limiting factor is a factor that restricts the Salinity-**Corals** tend to live in salty water, surviving in a range of 27-40 parts per thousand (ppt) but preferring 36 ppt. Depth-**Corals** live in shallow water and are.
